PROFESSIONAL SUMMARY

Frontend Engineer with over 2 years of professional experience developing and maintaining production-ready web and mobile applications across tourism, government, analytics, automotive, restaurant, IoT, and digital media industries. Specialized in React, Next.js, Astro, and Flutter, with practical experience working within Backend-for-Frontend (BFF) architectures, integrating REST APIs, and implementing technical SEO strategies. Passionate about building performant, maintainable, and user-focused applications while collaborating with distributed teams throughout the software development lifecycle.

PROFESSIONAL EXPERIENCE

Freelance Frontend Engineer

Mar 2024 – Present

Remote

Tech Stack: React • Next.js • Astro • SolidJS • TypeScript • Tailwind CSS

Delivered modern frontend solutions for businesses across tourism, analytics, automotive, restaurant, and government sectors.

- Delivered and maintained production-ready frontend applications for multiple client projects, implementing new features, resolving production issues, and improving existing codebases.
- Refactored and maintained frontend applications utilizing Backend-for-Frontend (BFF) architectures to simplify communication with backend services and improve maintainability.
- Translated Figma designs into responsive production-ready interfaces using React, Next.js, SolidJS, and Astro while maintaining consistency across desktop and mobile devices.
- Developed high-performance static websites using Astro with Schema.org structured data, XML sitemaps, robots.txt, canonical URLs, Open Graph metadata, responsive image optimization, and Google Search Console integration.
- Developed frontend interfaces for an internal government document management platform by integrating existing PDF digital signing services through REST APIs.
- Customized and optimized WordPress websites using Elementor, improving responsiveness, usability, visual consistency, and website performance.
- Collaborated directly with clients to understand requirements, deliver production-ready features, troubleshoot issues, and maintain existing web applications.

Freelance IoT Dashboard Developer

Aug 2024 – Mar 2025

Remote

Tech Stack: React • MQTT • Firebase • React Query • Recharts

Developed real-time monitoring dashboards for IoT systems, transforming operational data into interactive web applications.

- Developed real-time IoT monitoring dashboards using React, MQTT, and Firebase for monitoring connected devices and operational metrics.
- Implemented asynchronous data fetching and client-side caching using React Query to improve dashboard responsiveness and data consistency.
- Built interactive dashboards and operational data visualizations using Recharts to help users interpret telemetry and operational data.
- Collaborated with backend and IoT teams to integrate MQTT-based data streams into responsive frontend applications.

Freelance Mobile Developer

Mar 2025 – Present

Remote

Tech Stack: Flutter • React Native • REST API • Sanity CMS

- Maintained and enhanced cross-platform mobile applications by delivering new features, integrating backend services, and improving maintainability.
- Maintained and enhanced a Flutter-based short-form drama streaming platform by implementing new features, integrating REST APIs, supporting multilingual localization, and resolving production issues.
 - Migrated a subscription-based ebook application from React Native to Flutter while preserving existing functionality and improving long-term maintainability.
 - Developed mobile user interfaces integrated with Sanity CMS to support dynamic content management.
 - Collaborated with designers to transform Figma designs into responsive production-ready mobile applications for Android and iOS.

Full-Stack Engineering Apprentice

Jul 2023 – Dec 2023

Generasi Gigih 3.0

Tech Stack: React • Express.js • MongoDB • REST API

- Completed a six-month intensive software engineering program focused on collaborative full-stack application development using modern JavaScript technologies.
- Developed a Spotify-inspired music streaming web application using React, Express.js, MongoDB, and Spotify APIs.
 - Led development of a Waste Management web application utilizing REST APIs and MongoDB for efficient data management.
 - Collaborated with cross-functional team members using GitHub Projects and Git workflows throughout the software development lifecycle.
 - Applied software engineering best practices including version control, collaborative development, and structured project delivery.

TECHNICAL SKILLS

Languages	TypeScript • JavaScript • Dart
Frontend	React • Next.js • Astro • SolidJS • Tailwind CSS • HTML5 • CSS3
Mobile	Flutter • React Native
Backend & API	Node.js • NestJS • Express.js • REST API • Backend-for-Frontend (BFF)
Databases	PostgreSQL • MongoDB • Firebase • Supabase
DevOps	Docker • Docker Compose • Git • GitHub • Vercel • Netlify
Tools	MQTT • React Query • Recharts • WordPress • Elementor • Figma • Postman • Pi Coding Agent • Linux

EDUCATION

Bachelor of Electrical Engineering

2017 – 2024

Universitas Mataram, Mataram, Indonesia

ADDITIONAL INFORMATION

- Experience collaborating with remote clients and distributed development teams.
- Strong understanding of responsive web development, frontend architecture, and technical SEO.
- Comfortable integrating REST APIs and third-party services into production applications.
- Open to relocation and visa sponsorship opportunities.
